

STELLAR EVOLUTION

2 CFU

Teaching staff: Maria Letizia Piera PUMO

Email: marialetizia.pumo@unict.it or mlpumo@oact.inaf.it

Office: Department of Physics and Astronomy “Ettore Majorana” - room 358 (*Cittadella universitaria*, Building 6) or Catania Astrophysical Observatory - room 89

Telephone: +390953785237 (DFA - room 358) or +390957332319 (OACT - room 89)

Reception hours: by appointment via email

Program of the course:

- 1. Introduction:** general view of the research field, equations of stellar evolution and numerical techniques, regimes of the stellar evolution and transition masses (brief overview);
- 2. Stellar evolution (and associated nucleosynthesis) as a function of the initial stellar mass:** low- and intermediate-mass stars (brief overview), so-called Super-AGB stars, massive stars (brief overview);
- 3. Supernovae from Super-AGB and massive stars:** electron-capture supernovae, iron-core-collapse supernovae, post-explosive evolution of the ejected material and its radiation-hydrodynamical modelling;
- 4. Selected current issues:** convective overshooting in stellar evolution, supernovae progenitors, peculiar explosive events, electromagnetic counterparts of gravitational wave sources.
