ANNO ACCADEMICO 2018 - 2019

Strong Interactions at Finite Temperature and Density

3 CFU

Teaching staff

VINCENZO GRECO

Email: greco@lns.infn.it

Office: Department of Physics and Astrophysics, Building 6, Room 346

Telephone: +39 095 3785403

Reception hours: send an e-mail to: greco@lns.infn.it

Program of the course:

Basic ideas and concepts of non-abelian gauge theories: asymptotic freedom and confinement. Quantum Chromodynamics (QCD) a general overview: perturbative and non-perturbative regimes. Parton model: distribution functions and basic properties. Relativistic pp, pA, AA collisions and elementary calculation of $pp \rightarrow gg, qq, qg \rightarrow \text{hadrons}$..

QCD phase diagram of nuclear matter at finite density and temperature. Equation of State of the quark-gluon plasma and its transport coefficients. Basic thermodynamics of the phase transition from hadronic matter to the Quark-Gluon Plasma (QGP) in the Early Universe and in Neutron stars. Impact of the Strong Interaction in the expansion of the Early Universe and in the evolution of ultra-relativistic collisions.
