DIPARTIMENTO DI FISICA E ASTRONOMIA

DOTTORATO DI RICERCA IN FISICA

ANNO ACCADEMICO 2019 - 2020

Selected topics in Quantum Technologies

3 CFU

Teaching staff

Giuseppe Falci

Giuseppe Angilella

Email: gfalci@dmfci.unict.it

Office: DFA 212

Telephone: +39 095 3785366

Reception hours: Monday 18-20, Wednesday 10-12 (to be confirmed by e-mail)

Program of the course:

Quantum Technologies (QT) is an interdisciplinary subject where physics, computer science and chemistry merge. In the last decade interest has grown both for the conceptual importance of methods, requiring a deeper understanding of quantum mechanics, and for the enormous potential in applications. QTs aim at exploiting exquisite quantum behavior to perform tasks which are tackled inefficiently by that present day technologies. For instance quantum computation relies on superpositions and entanglement to achieve exponential speedup of certain algorithms, which in a standard digital computer take a time growing exponentially with the input. The course presents selected topical concepts, techniques and physical systems of interest in the field of QT.

- 1) Quantum circuits with superconductors [1] (4 ore)
- 2) Cavity QED [2] and circuit QED [1] (4 ore)
- 3) Ultrastrong light-matter coupling [3] (2 ore)
- 4) Optimal control Theory for quantum systems [4] (2 ore)
- 5) Quantum simulators. [5] (2 ore)
- 6) Elements of advanced numerical methods: partial differential equations (7 ore)
